

# SELF-MANAGED MONITORING PROGRAM FOR COASTS

GERARDO M. E. PERILLO – ALEJANDRO J. VITALE  
INSTITUTO ARGENTINO DE OCEANOGRAFÍA - CONICET  
UNIVERSIDAD NACIONAL DEL SUR (UNS)

<http://emac.iado-conicet.uns.edu.ar>

# OBJECTIVES

- Overview of the instrumentation
- Overview of an actual monitoring program
- Course objectives
- Course development

## Low-cost Sensors

### SENSORS DEVELOPED

- CONDUCTIVITY + TEMPERATURE
- OPTICAL BACKSCATTER SENSOR
- WATER LEVEL (PRESSURE & ACCUSTIC)
- CURRENTMETER
- WAVE SENSOR (ACCELERATION & PRESSURE)
- WIND DIRECTION & SPEED (COMPASS CORR,)
- SOLAR RADIATION (PIRANOMETER)
- TEMPERATURE (AIRE+WATER+ SOIL > CHAINS)
- PLUVIOMETS (STAINLESS STEEL)
- DEPTH SESNOR (ACCOUSTIC – PFOR BUOYS )
- ACCOUSTIC PROFILER– 115 KHZ (test fase)

**BUILT BY RESEARCHERS FOR RESEARCHERS**

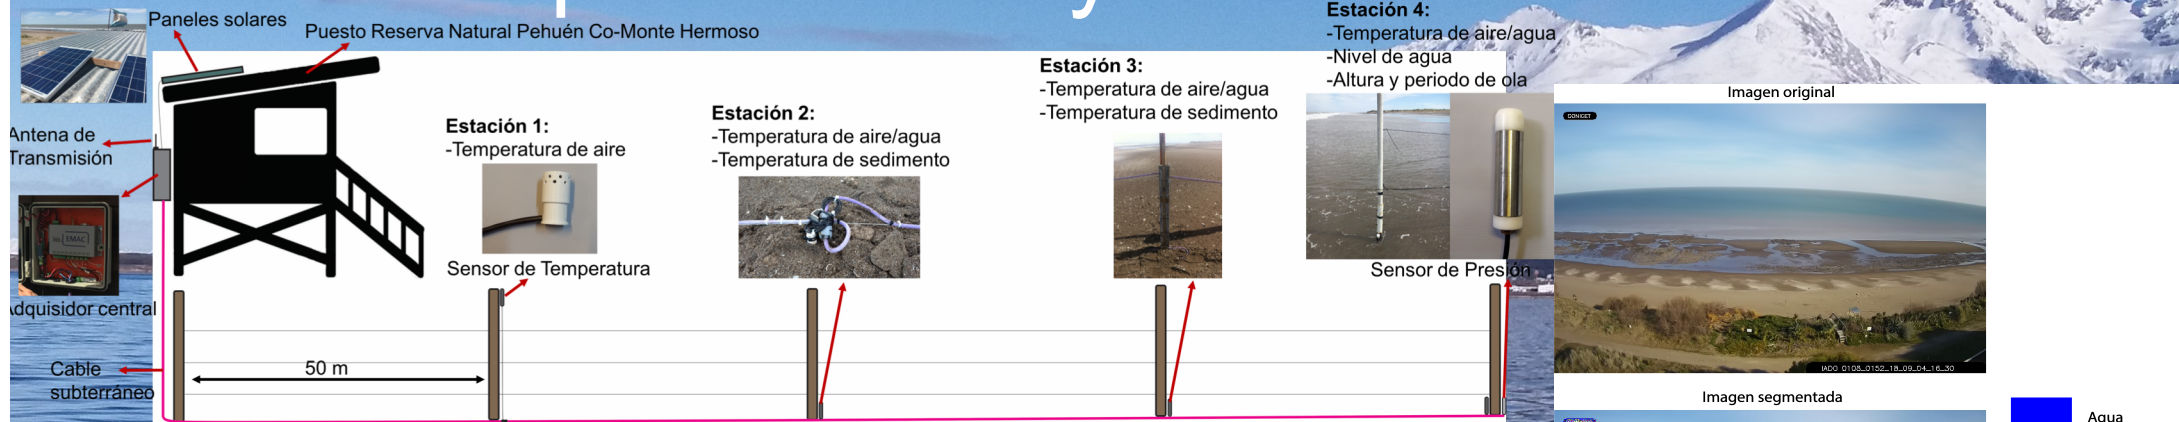

<http://emac.iado-conicet.gob.ar>

# Example of a Fully Monitored Beach

- Agua
- Rompiente
- Rocas
- Arena Húmeda
- Arena Seca

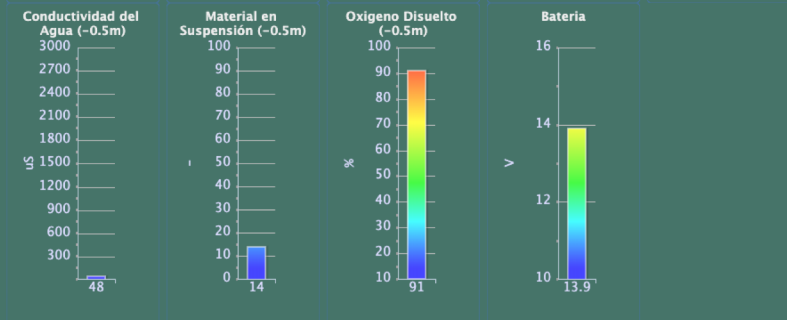

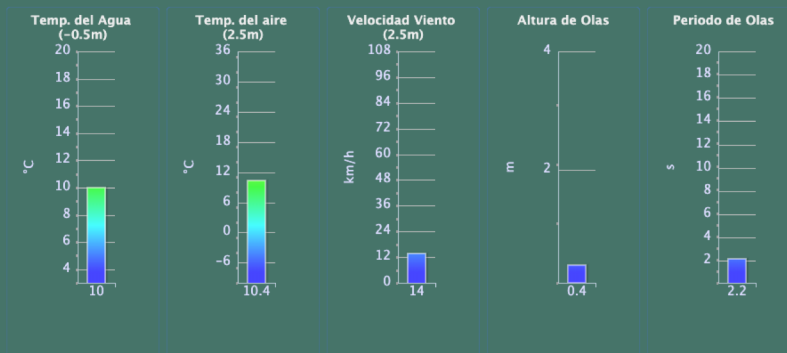

# Lago Argentino 2 FEB 2020

Boya - Lago Argentino  
Ultimo registro 2020-02-05 09:40:00

<b>Temp. del Agua (-0.5m)</b> <b>10.0 (°C)</b> (min.) 3.7 (med.) 12.7 (max.) 19.7	<b>Temp. del aire (2.5m)</b> <b>10.4 (°C)</b> (min.) 4.2 (med.) 13.3 (max.) 23.2	<b>Velocidad Viento (2.5m)</b> <b>14.0 (km/h)</b> (min.) 0.0 (med.) 10.0 (max.) 35.5	<b>Altura de Olas</b> <b>0.40 (m)</b> (min.) 0.20 (med.) 0.85 (max.) 2.00	<b>Periodo de Olas</b> <b>2.20 (s)</b> (min.) 2.20 (med.) 7.35 (max.) 15.90
<b>Conductividad del Agua (-0.5m)</b> <b>48 (uS)</b> (min.) 10 (med.) 704 (max.) 2 675	<b>Material en Suspensión (-0.5m)</b> <b>14 (-)</b> (min.) 4 (med.) 8 (max.) 55	<b>Oxigeno Disuelto (-0.5m)</b> <b>91 (%)</b> (min.) 17 (med.) 83 (max.) 99	<b>Bateria</b> <b>13.9 (V)</b> (min.) 12.7 (med.) 13.3 (max.) 13.9	

# COURSE OBJETIVES AND ACTIONS

- To help develop an integrated network of low-cost monitoring station around the Atlantic
- To train young professionals and graduate students to develop their on low-coast sensors and platforms
- To train young professionals and graduate students to replace and repair simple sensors
- To train young professionals and graduate students to manage and analyze time series data

# COURSE DEVELOPMENT

- Our plan is to start with a pilot course. **If successful it can be replicated at selected locations**
- Each course will have as much as **10 participants + 2 teachers**
- Participants must have a degree or advance knowledge of electronics and/or mechanics as well as adequate oceanographic formation
- Location must have at least an electronic lab and a machine shop well equipped
- Each course should be about 2 weeks long due to both theoretical and practical activities

# COURSE OUTCOME

Participants will be able to

- Build their own sensors and platforms
- Repair and replace those sensors in short time
- Establish how to define the best site and conditions for locating a sensed platform
- Make the actual installation of the sensed platform
- Define a maintenance program fo the platform and sensors
- Make a QA/QC of the data
- Analyze time series data
